

SIX SIGMA

6Net

6Net Training and Deployment Support System

- *MAIC project management approach geared to cross-functional activity and boundariless communication*
- *User-friendly applications allow for easy entry, retrieval and analysis of current data*
- *Collaborative platform supports truly interactive workflow*
- *Web-enabled system allows easy access, high level of security*

“Discovery consists of seeing what everybody else has seen and thinking what nobody has thought.”

– Albert Szent-Gyorgyi

6Net Support System

Your business holds a wealth of intellectual capital. The problem is, most businesses have a blind spot – they don't know what they know. That means valuable data, historical records, communication logs, and analytical (as well as anecdotal) experience sits virtually untapped.

And if your organization is deploying Six Sigma, that collective wisdom is a powerful resource just waiting to be utilized to positively impact your bottom line through reduced costs, improved cycle time and increased customer satisfaction.

6Net provides the environment in which your employees can enter, share and access crucial information that allows them to manage your knowledge base. As a platform for the application of the complete array of Six Sigma tools, 6Net creates a dynamic, real-time universe in which you manage your projects with data on demand. Records of previous Six Sigma projects provide historical perspective of successes and lessons learned in the past. Communication flows in every direction, allowing true collaboration between Master Black Belts, Black Belts, Green Belts and Yellow Belts. Executive Leaders and Champions can easily create meaningful reports to instantly analyze any combination of projects.

The Strength of Six Sigma Qualtec

Six Sigma Qualtec, a pioneer in Six Sigma training and consultation, has built on its years of leadership experience to develop the “next wave” of training and deployment support systems. 6Net is a web-based tool set that combines the success of traditional Six Sigma applications with a powerful transfer-of-knowledge philosophy that assures the information you need is available when you need it, is framed in the proper context, and establishes a completely new way of seeing and thinking about your goals and objectives.

6Net Training and Deployment Support System

The Heart of Wisdom

At 6Net's core are four basic functional areas: Project Management, Knowledge Capture and Coordination, Reporting, and Learning Enablement. Each function is designed to capitalize on the data and information already available to you through your Six Sigma efforts. 6Net creates value through the seamless integration of databases, e-mail communications, analytical tools and reporting structures.

1 Project Management

The choreography of cross-functional activity to complete a complex Six Sigma project is successfully enabled through 6Net. Every Belt strives to complete projects on time and within budget. Using the Measure-Analyze-Improve-Control (MAIC) methodology, 6Net guides the Belt to success. 6Net coordinates this effort by allowing accessibility in real time to distributed workforces, across geographical and cultural boundaries.

2 Knowledge Capture and Coordination

6Net provides a systematic process of finding, selecting, organizing, distilling and presenting information in a way that improves an employee's comprehension. Simply stated, 6Net helps an organization gain insight and understanding from its own experiences.

3 Reporting

No matter what your role in a deployment, 6Net provides the information you need in the format you need it in. Champions, Executive Leadership and Belts often feel that they are drowning in data and starving for knowledge. 6Net's "at-a-glance" project status feature and reporting options provide a high-level, rolled-up view with drill-down capabilities when a more granular look is needed. You won't get just a snapshot of each project deliverable. 6Net is designed to help you collect the data that accumulates over a project's life. You'll have a holistic view of what happened, not just a single metric for one particular day. 6Net provides the ability to calculate return on investment and determine real cost savings.

4 Learning Enablement

Regardless of whether training is led by your instructors or by Six Sigma Qualtec's Master Black Belts, it is essential for current information to be available at every phase of the project to keep new Belts on track. Green, Yellow or Red status codes are assigned to each project phase, and context-sensitive messaging between trainer and candidate is used throughout training. Belts complete mastery assessment testing through an online evaluation process.

The System

6Net is a server-based tool accessible through any web-browser software. Six Sigma Qualtec provides users with access to the system through several options. Once online, users can enter, manage and retrieve data about specific projects. Because the software is web-based, Six Sigma Qualtec can easily update and maintain it. You can be certain you'll have the most recent system version and the latest updates available.

Security

6Net keeps your security and data privacy in mind. Using the latest technology, data is secured both on the server and throughout the data transmission process.

Support

Our Help Desk option ensures that users are comfortable using 6Net and receive the maximum benefits of Six Sigma tools and techniques. Help Desk experts are prepared to walk you through any 6Net system function or tool application. Our support staff understand Six Sigma.
